Tyree Chappell

AI and full-stack engineer

Johnson City, TN · Open to relocate · mobhater02@gmail.com · github.com/MobScripting · tyree-portfolio.vercel.app

SUMMARY

Full-stack engineer who builds with AI agents daily. I run Claude Code with real tools, decision records and ticketed plans to ship production software and games, backed by over four years of IT infrastructure and a self-hosted SaaS in production.

PROJECTS

Tended Earth · Creative director and programmer — Oct 2026 to present · Godot 4, Claude Code, MCP

- Build a 3D survival game with Claude Code operating the Godot editor through an MCP server: it creates scenes, writes GDScript, runs the game and reads runtime errors.
- Keep the agent consistent with a written process: 45 numbered design decisions and question rounds I answer before each milestone.
- 70 commits in five days: enemy AI driven by noise events, procedural audio, fire spread on a 2 m grid with wind, fuel and moisture, save and load, and a homestead build mode.

This portfolio · Director — Oct 2026 · Next.js 16, react-three-fiber

- Planned in recorded interview rounds that became architecture decision records, a domain glossary and 15 tickets with blocking edges, then built ticket by ticket in Claude Code agent sessions.
- Verification is part of the loop: Playwright captures, Lighthouse runs, a PDF check that fails on overflow or a phone number, and every claim fact-checked against its source repo before publishing.

FlowPulse · Creator and operator — Feb 2026 to present · flowpulseapp.org

- Designed, built and operate a multi-tenant SaaS for small-business cash flow: invoicing, expenses, time tracking, budgets, bank reconciliation, a client portal and approval workflows.
- Node.js, Express, PostgreSQL and Prisma (33 data models, 190 route handlers); Stripe billing, SAML single sign-on and TOTP two-factor login; Docker Compose on a self-hosted Proxmox server.

AD Account Manager · Internal IT tool — Next.js 14, TypeScript

- Automated my own IT runbook: provisions Active Directory accounts from role templates or spreadsheets through a typed PowerShell bridge, with live job status and an audit log.

EXPERIENCE

Field Engineer · Unbound Digital, Johnson City, TN — Mar 2025 to Present

- Deploy and maintain infrastructure for business clients across industries: servers, virtualization, routers, switches, firewalls, wireless, VoIP and cloud services.
- Administer Microsoft 365 tenants, including Exchange Online, Azure Active Directory and endpoint management.
- Document procedures and network configurations so other technicians can repeat the work, the habit that led to automating it.

Help Desk Technician · K-VA-T Food Stores, Abingdon, VA — Mar 2022 to Mar 2025

- First-line support for a regional grocery chain's store systems: registers and self-checkout, EFT and pin pads, pharmacy, fuel, scales and back-office software.
- Monitored store communications and security and refrigeration alarms, then dispatched technicians and vendors and followed each call to resolution.

SKILLS

AI tooling	Claude Code, Model Context Protocol (MCP), agent skills and subagents, ticket-driven agent workflows
Languages	TypeScript, JavaScript, GDScript, SQL, PowerShell, C#
Web	React, Next.js, three.js, Node.js, Express, PostgreSQL, Prisma, Stripe
Infrastructure	Docker, nginx, Proxmox, Windows Server, Active Directory, Microsoft 365 and Azure AD

EDUCATION AND CERTIFICATIONS

John S. Battle High School, Bristol, VA · 2020 · IT Fundamentals certification · Authorized to work in the US for any employer
