Tyree Chappell

Full-stack engineer

Johnson City, TN · Open to relocate · t.chappell0222@gmail.com · github.com/MobScripting · tyree-portfolio.vercel.app

SUMMARY

Full-stack engineer with over four years in hands-on IT infrastructure. I design, ship and self-host production SaaS, automate the IT work I do every day, and build with AI agents in the loop.

PROJECTS

FlowPulse · Creator and operator — Feb 2026 to present · flowpulseapp.org

- Designed, built and operate a multi-tenant SaaS for small-business cash flow: invoicing, expenses, time tracking, budgets, bank reconciliation, a client portal and approval workflows.
- Node.js and Express API on PostgreSQL with Prisma (33 data models, 190 route handlers, 32 migrations); React and Vite front end.
- Stripe subscriptions with signature-verified webhooks and plan limits enforced in middleware; SAML single sign-on, TOTP two-factor login, and hashed refresh tokens rotated on every use.
- Deployed with Docker Compose (production and staging) behind nginx on a self-hosted Proxmox server; scheduled jobs generate recurring invoices, send reminders and email reports.

AD Account Manager · Internal IT tool — Next.js 14, TypeScript

- Provisions Active Directory accounts from role templates, singly or in bulk from CSV/XLSX, with duplicate checks against the directory.
- Typed bridge to PowerShell (JSON over stdin, one process per batch); live job status over Server-Sent Events, outgoing webhooks and an audit log.
- One-script installer sets up Node.js, the RSAT tools, the build, the database and an auto-start scheduled task.

EXPERIENCE

Field Engineer · Unbound Digital, Johnson City, TN — Mar 2025 to Present

- Deploy and maintain infrastructure for business clients across industries: servers, virtualization, routers, switches, firewalls, wireless, VoIP and cloud services.
- Administer Microsoft 365 tenants, including Exchange Online, Azure Active Directory and endpoint management.
- Run backup monitoring, disaster recovery, RMM and security tooling across many client environments at once, prioritizing critical incidents.

Help Desk Technician · K-VA-T Food Stores, Abingdon, VA — Mar 2022 to Mar 2025

- First-line support for a regional grocery chain's store systems: registers and self-checkout, EFT and pin pads, pharmacy, fuel, scales and back-office software.
- Monitored store communications and security and refrigeration alarms, then dispatched technicians and vendors and followed each call to resolution.
- Pushed price changes to stores and scales, and managed associate email and network account unlocks.

Day Stocker · Food City, Bristol, VA — May 2019 to Mar 2022

SKILLS

Languages	TypeScript, JavaScript, SQL, PowerShell, C#, Lua
Front end	React, Next.js, Tailwind CSS, three.js
Back end	Node.js, Express, Prisma, PostgreSQL, SQLite, REST, Server-Sent Events, Stripe, SAML
Infrastructure	Docker, nginx, Proxmox, Linux containers, Windows Server, Active Directory, Microsoft 365 and Azure AD, networking and firewalls, VoIP
Tools	Git and GitHub, Claude Code

EDUCATION AND CERTIFICATIONS

John S. Battle High School, Bristol, VA · 2020 · IT Fundamentals certification · Authorized to work in the US for any employer
